

Type 2 diabetes drug from the GLP-1 agonist drug class

At Desjardins Insurance, we are constantly working to ensure that our insureds have access to the best drug treatments at the best possible cost, always in accordance with Health Canada's approved indications.

This drug is covered for the treatment of **type 2 diabetes only**. It is not eligible for reimbursement when used for other health conditions, such as weight loss (without associated diabetes).

To ensure that we reimburse this medication for the correct indication and to ensure that the treatment is appropriate for the disease state, a new control measure has been put in place for all insureds who **begin** treatment.

If an insured with **type 2 diabetes** is denied reimbursement for this medication at the pharmacy and if they are in one of the following situations:

- The insured does not claim any other treatment for diabetes.
- The insured has already obtained reimbursement for this drug from his former insurer.

They can contact our Client Relations Centre, toll-free, at **1-844-410-6485** to validate their coverage.

Finally, please be sure to keep any documentation that may be required to support your claims (approvals, pharmacy receipts, etc.). You may be asked to submit them.
